

LEXAN™ SHEET SOLUTIONS FOR ELECTRICAL VEHICLE CHARGING STATIONS

SAFE, DURABLE, AND AESTHETIC STATIONS

Electric Vehicles (EVs) are shaping the future of transportation, and charging stations are essential to the infrastructure supporting the rapidly growing EV market. As a result, EV Charging Stations are on a similar growth trajectory. To meet the core industry requirements, solutions must be **durable** , have low life cycle costs, and **comply with global fire norms** .

For offering an augmented solution, mechanical properties are essential, and **design flexibility** and **ease of processing** need to be considered in the material selection process. Thermoplastics potentially enable differentiated design opportunities with low production volumes for manufacturers compared to metals or other traditional materials.
